Core Project Tasks

1.	Introduction and motivation
2.	Core Project Tasks
3.	State of the art
3.1	Workflow Engine
3.2	Apache Airflow and Argo Workflow
3.3	Workflow Engines in 3D data Processing
4.	Requirements of the software system
5.	Selection of a workflow Engine
6.	Conceptual 3D Data Processing Pipeline
7.	Evaluation
8.	Conclusion and Outlook

So what is a Workflow Engine?

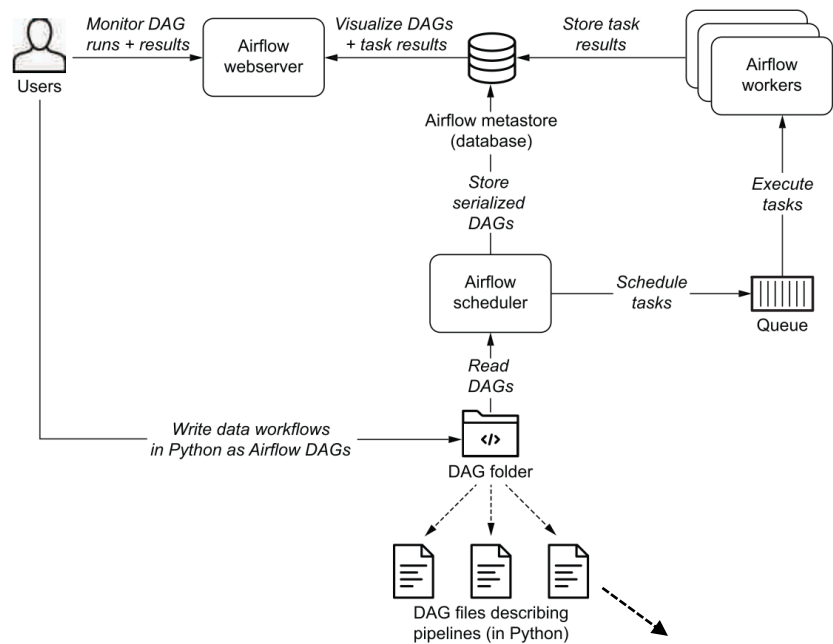

- Software systems that facilitate the automation of a workflow
- A workflow consists of several processes
- Defines Workflows in DAGs

[3]

[4]

Apache airflow

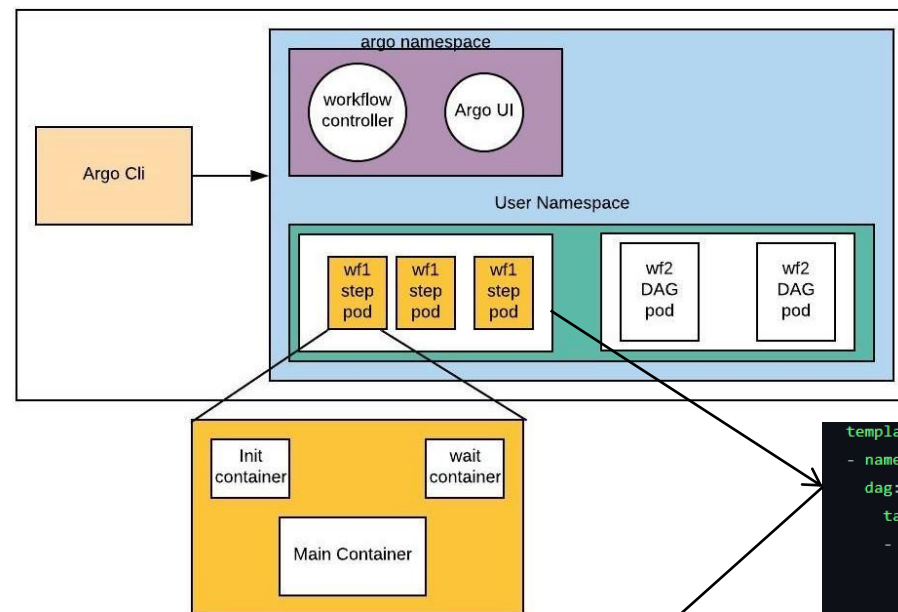

```
t1 = BashOperator(
    task_id='print_date',
    bash_command='date',
)

t2 = BashOperator(
    task_id='sleep',
    depends_on_past=False,
    bash_command='sleep 5',
    retries=3,
)
```

[5]

Argo Workflow

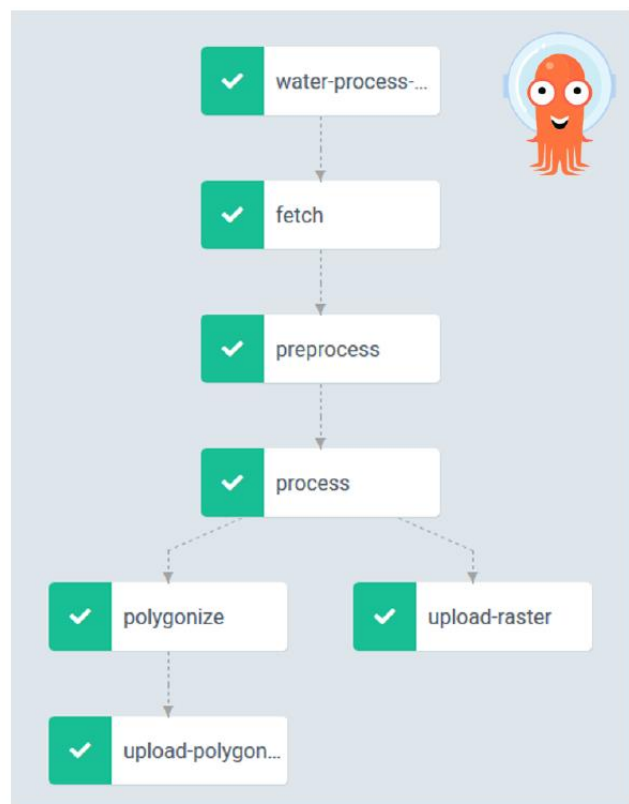

```
- name: echo
  inputs:
    parameters:
      - name: message
  container:
    image: alpine:3.7
    command: [echo, "{{inputs.parameters.message}}"]
```

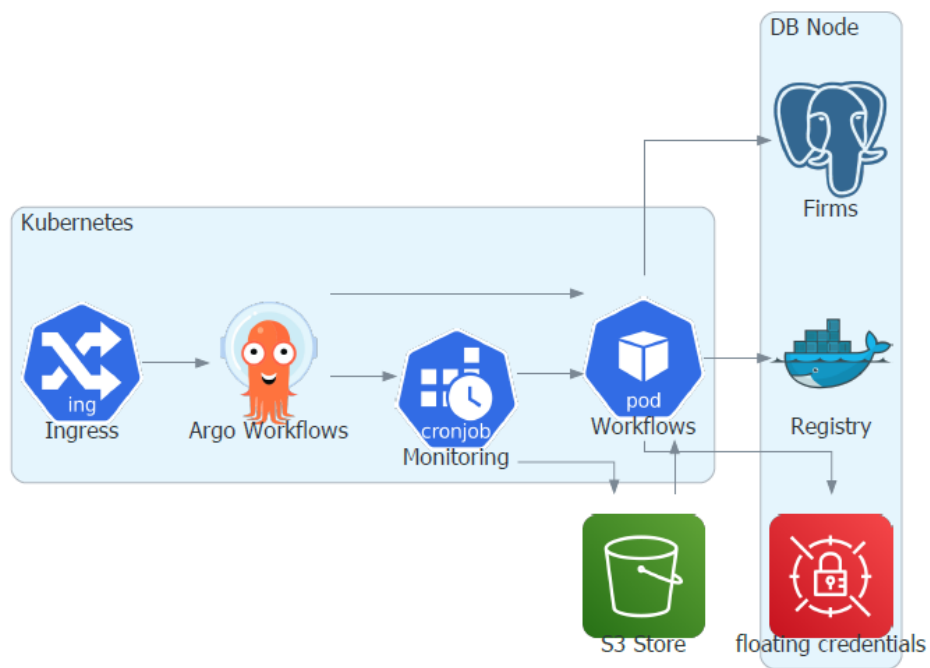

```
templates:
- name: diamond
  dag:
    tasks:
      - name: A
        template: echo
        arguments:
          parameters: [{name: message, value: A}]
      - name: B
        depends: "A"
        template: echo
        arguments:
          parameters: [{name: message, value: B}]
      - name: C
        depends: "A"
        template: echo
        arguments:
          parameters: [{name: message, value: C}]
      - name: D
        depends: "B & C"
        template: echo
        arguments:
          parameters: [{name: message, value: D}]
```

Scalable Processing Of Copernicus Sentinel satellite Images Using Argo Workflows

[7]

Functional Requirements

Loading and saving 3D data object

Containerization of tasks

Artifact storage system

Visual workflow editor

Reusable task template

Deployment in kubernetes

Non-Functional Requirements

Notification system

Detailed logs of the pipeline execution

Version controlled DAG/Task editing

Appropriate error handling

Appropriate UI usability for non-expert

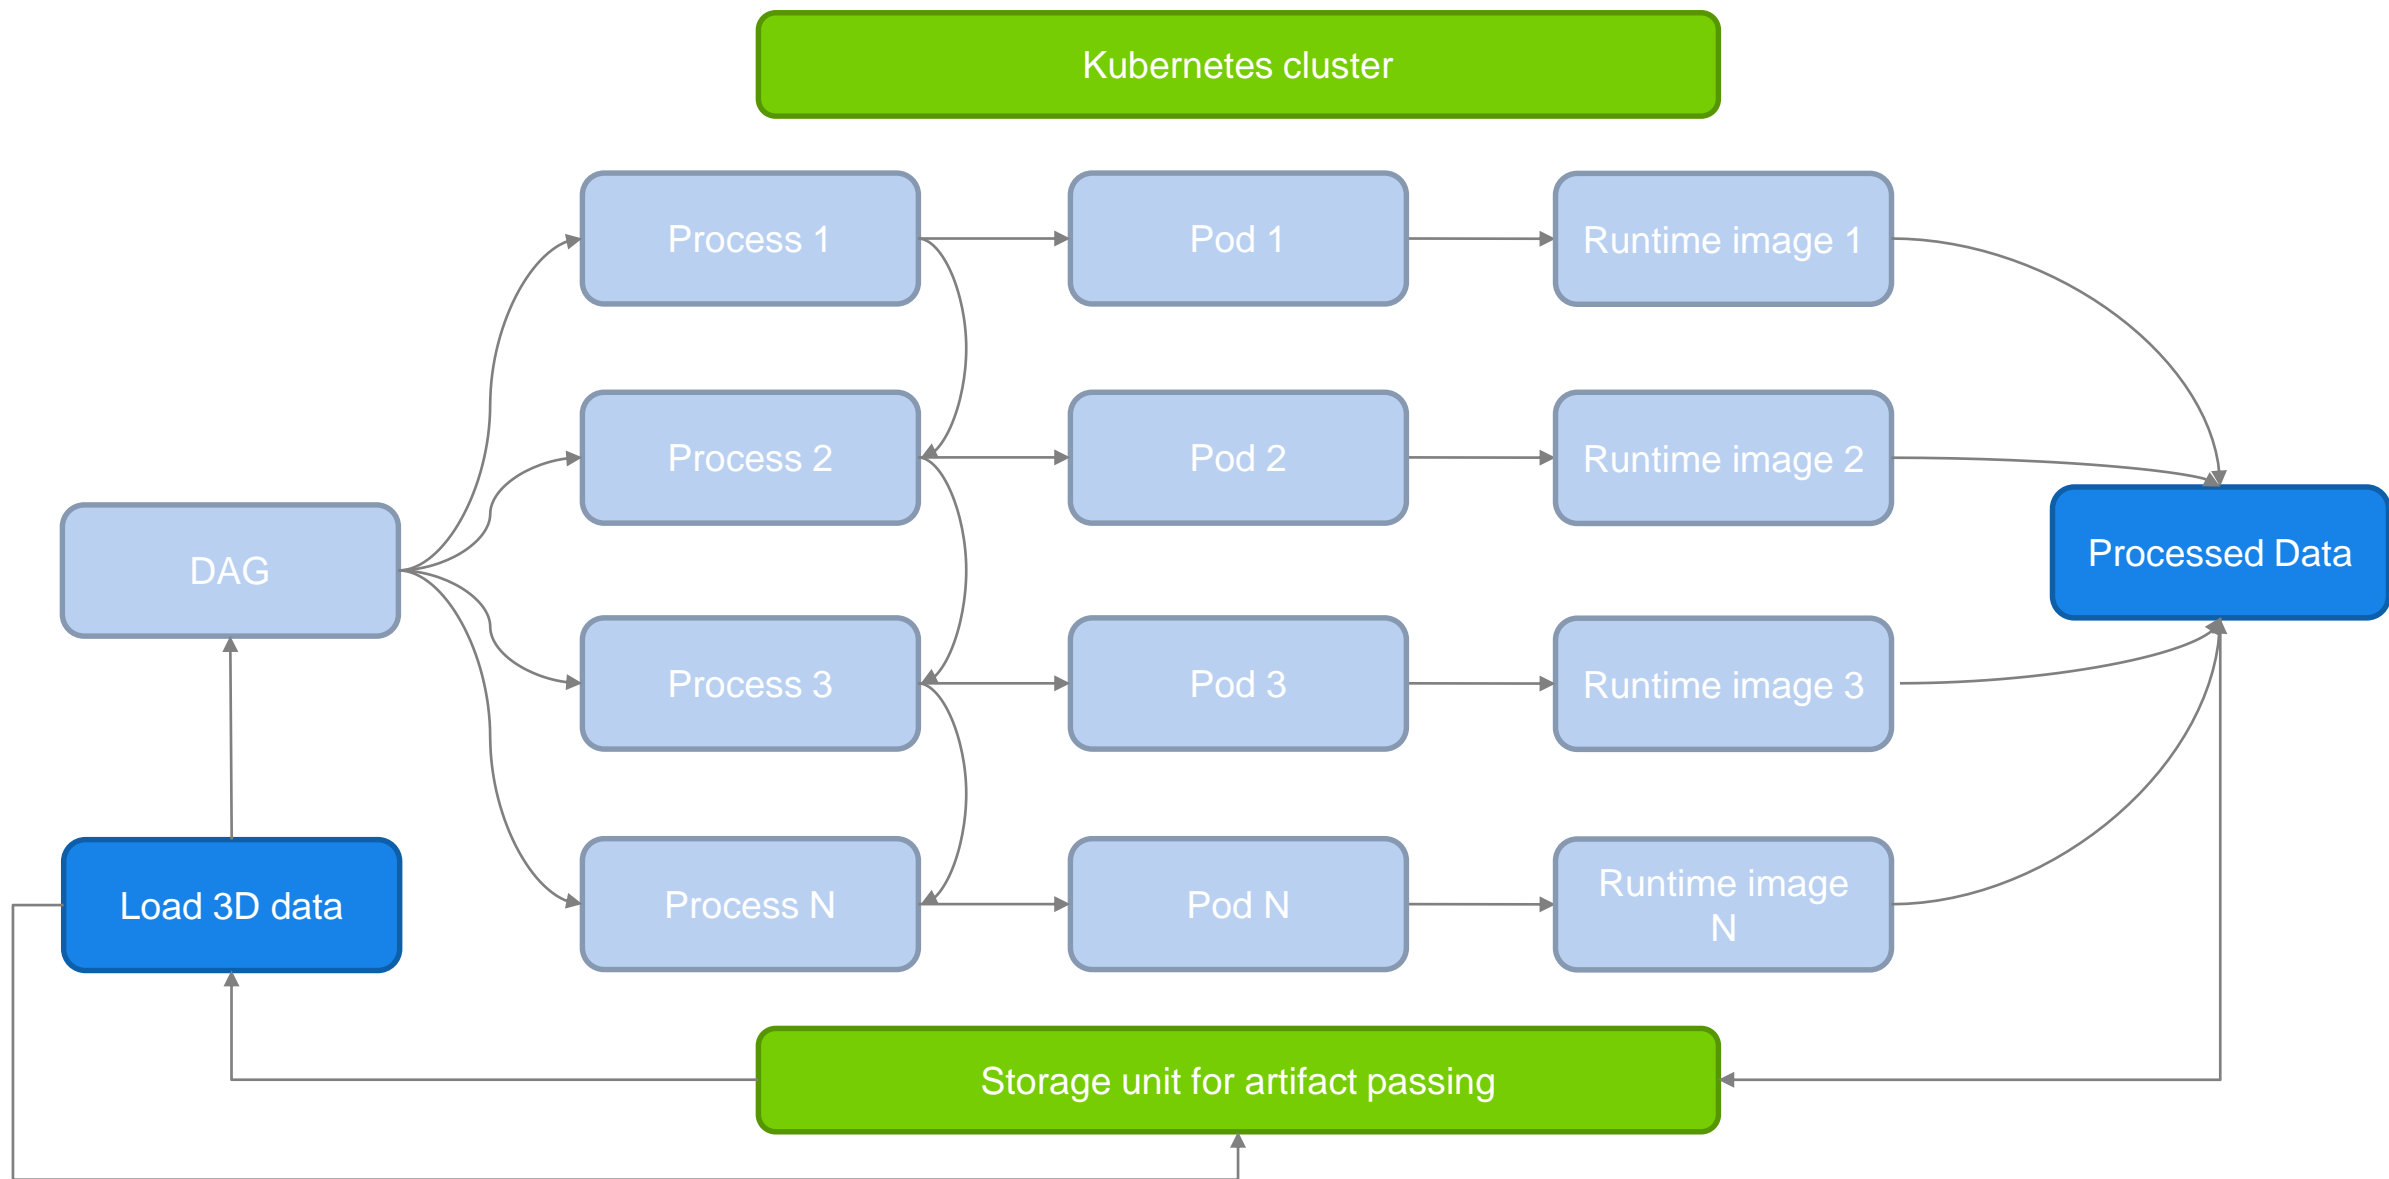

1.	Introduction and motivation
2.	Core Project Tasks
3.	State of the art
4.	Requirements of the software system
5.	Selection of a workflow Engine
6.	Conceptual 3D Data Processing Pipeline
7.	Evaluation
8.	Conclusion and Outlook

Average Weight-score analysis

	Apache Airflow	Argo Workflow
Functional Requirements	3.4	4.2
Non-Functional Requirements	4.1	4.12

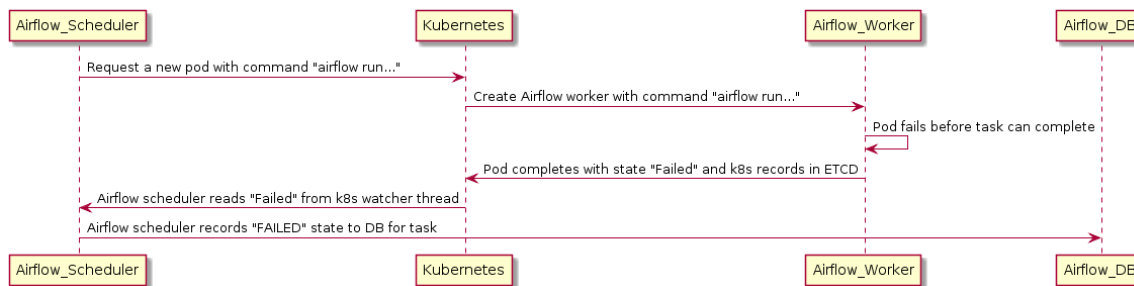

1.	Introduction and motivation
2.	Core Project Tasks
3.	State of the art
4.	Requirements of the software system
5.	Selection of a workflow Engine
6.	Conceptual 3D Data Processing Pipeline
6.1	Conceptual Pipeline
6.2	Different Components of Conceptual Pipeline
7.	Evaluation
8.	Conclusion and Outlook

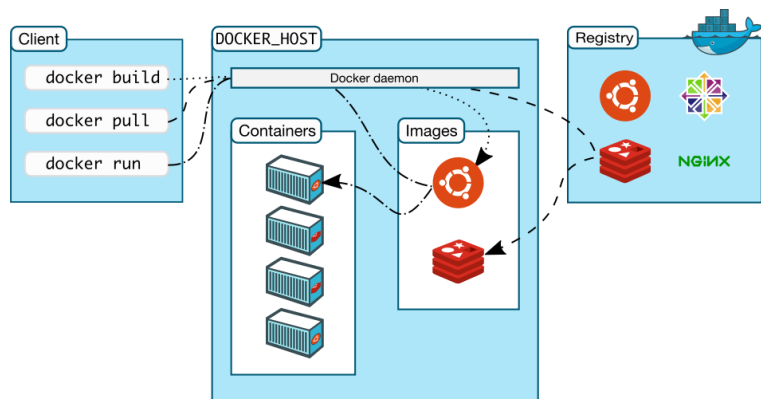

Kubernetes Cluster

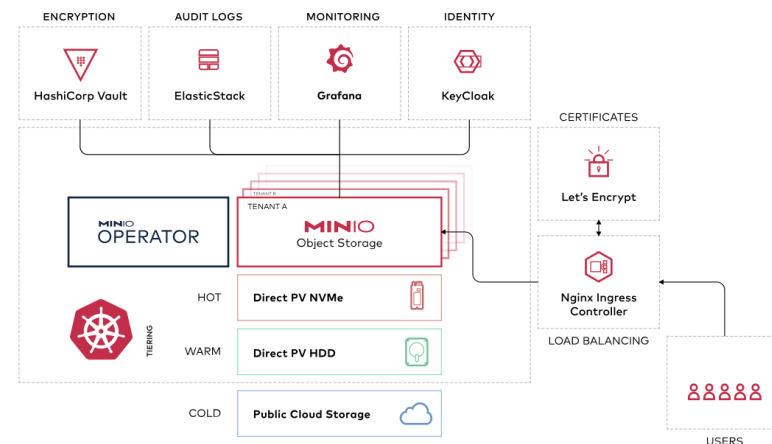

Fault Handling

Containerization of tasks

Artifact handling/Storage unit (s3)

1. Introduction and motivation

2. Core Project Tasks

3. State of the art

4. Requirements of the software system

5. Selection of a workflow Engine

6. Conceptual 3D Data Processing Pipeline

7. Evaluation

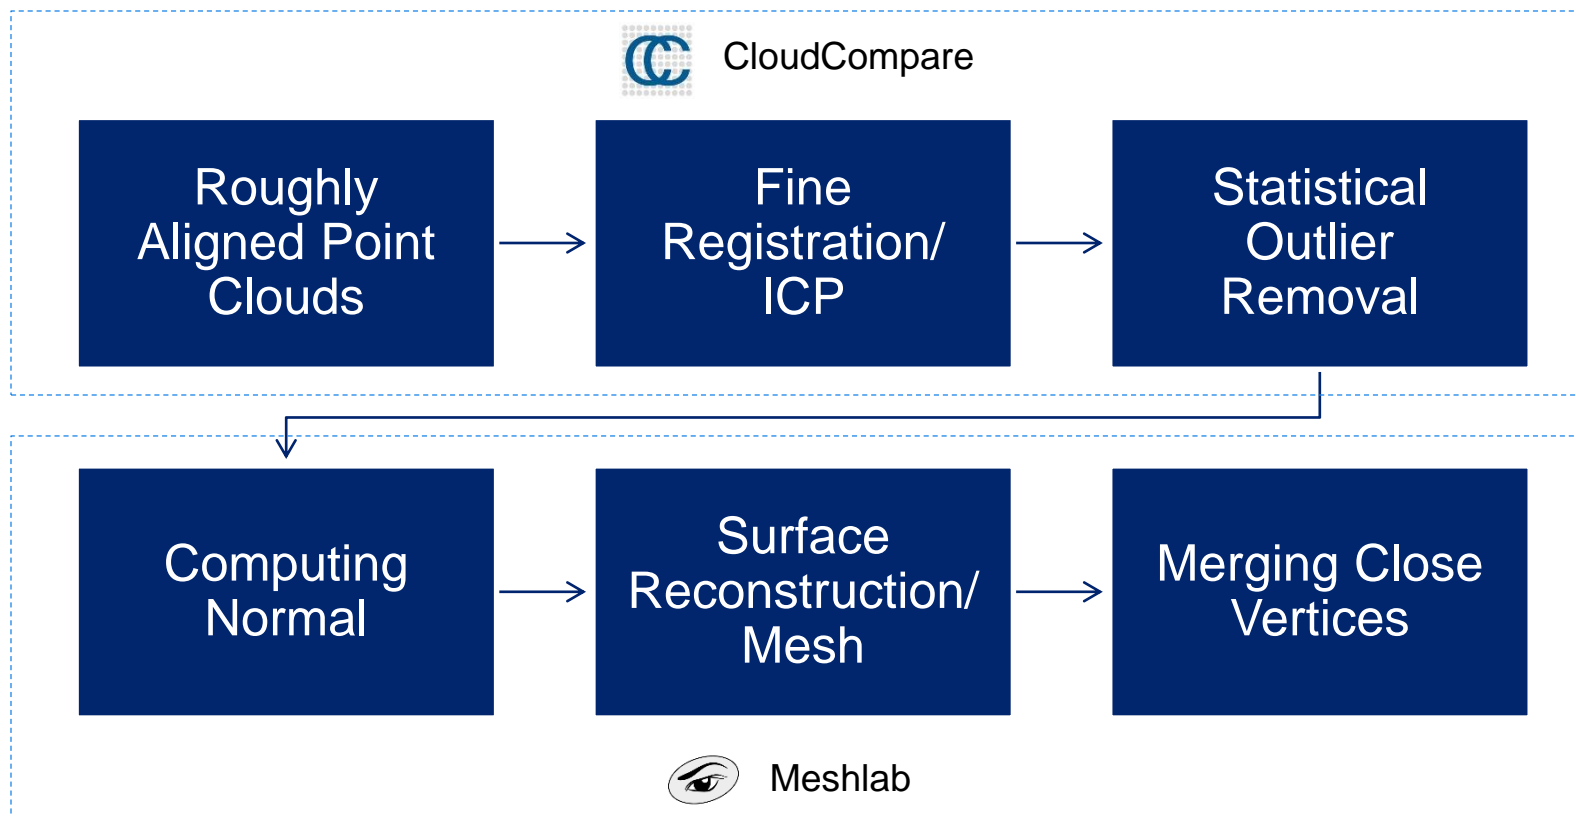

7.1 Example 3D data processing pipeline

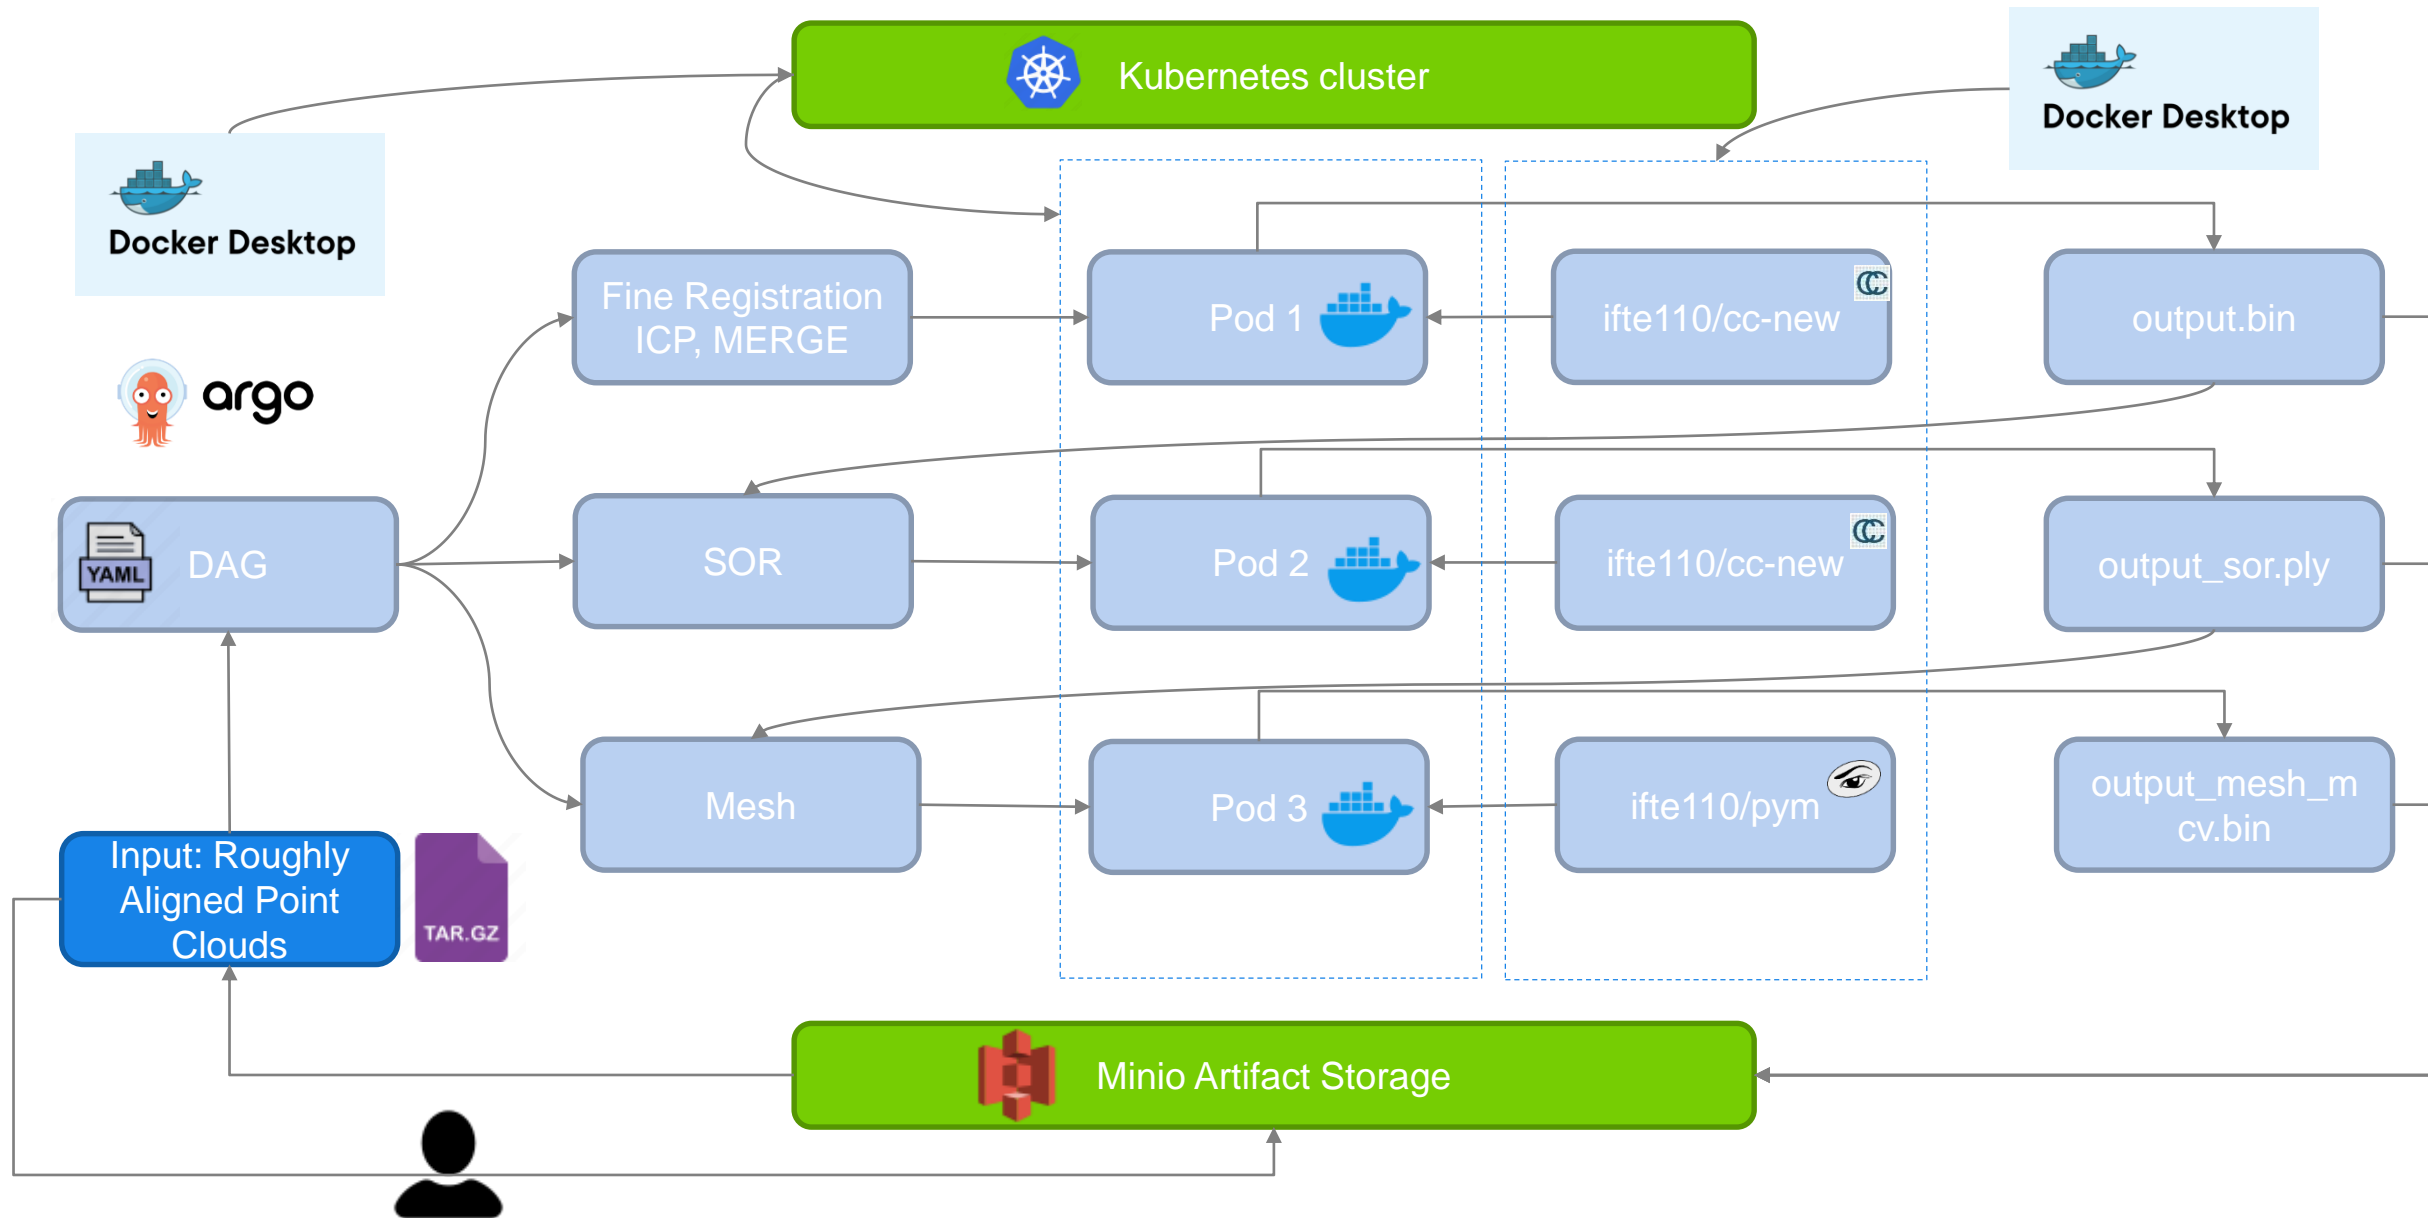

7.2 The automated pipeline

7.3 Artifacts generated by the pipeline

7.4 Performance Evaluation

8. Conclusion and Outlook

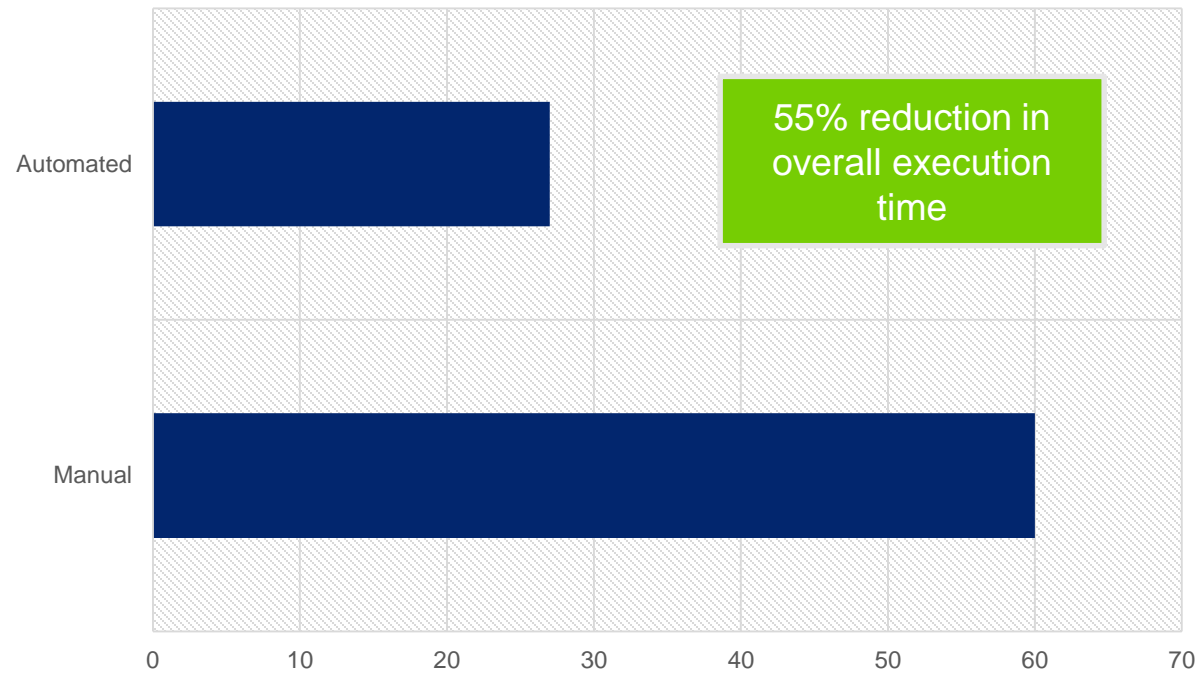

Input files (Roughly Aligned Point Clouds)

Output files

Execution Time in mins

Reduces Execution time

Appropriate error handling

Parallel processing

Reduction of human interaction

Third Party Software Integration

Easy to use reusable task template

1.	Introduction and motivation
2.	Core Project Tasks
3.	State of the art
4.	Requirements of the software system
5.	Selection of a workflow Engine
6.	Conceptual 3D Data Processing Pipeline
7.	Evaluation
8.	Conclusion and Outlook

Level of Automation

Ease of use

Overall Exe Time

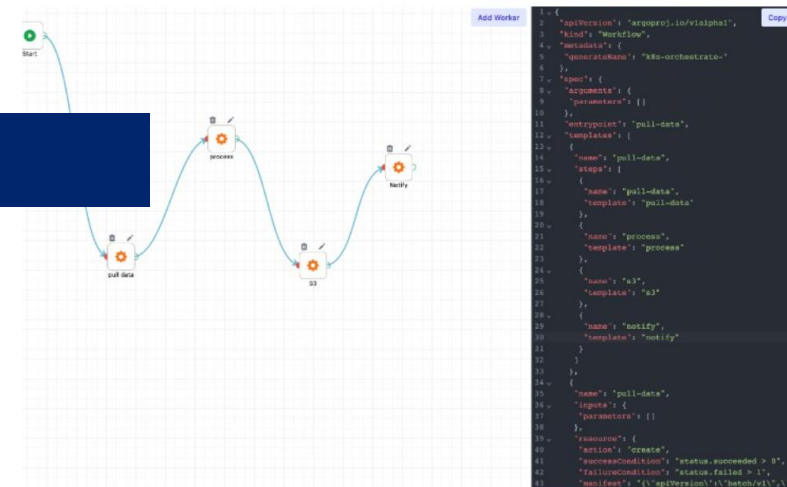

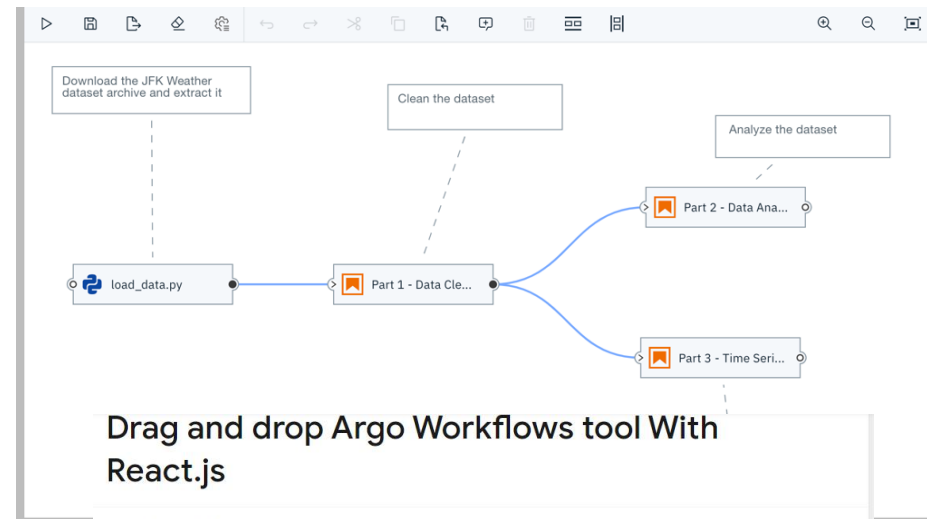

Parallel Processing and Error Handling

More computing power

Visual Workflow Editor [12, 13]
